

What Can We Learn with ML in Particle Physics, and How?

Thursday, 7 November 2019 15:45 (20 minutes)

ML has a deep potential to extend our ability to understand Nature, beyond common knowledge. As the very first steps to realize it, we use ML to seek for answers to one of the not-well-solved problems in particle physics. Our focus is not only to improve the solution, but to develop ways to figure out what the network has learned.

Presenter: Prof. JUNG, Sunghoon (Seoul National University)

Session Classification: Invited talks - Physics and Astronomy 1-2
